CPS PROJECT

PT.DAYA CIPTA KEMASINDO, INDONESIA

CPS 2023 UPGRADE

PT Daya Cipta Kemasindo is one of the leading Indonesian companies operating corrugated carton manufacturing plants. Their plant locations are in Tangerang, Citbitung and Karawang.

Over the years, PT Daya Cipta has kept its operations up to date by constantly upgrading its plants to the latest updates that Prestige Atlantic Asia offers. This time, the CPS 2023 upgrade is part of their series of improvements to their operations. Every new upgrade ensures that features like automation and better UI can make operations easier to handle, faster and more efficient. With AI being one of the significant drivers of Industry 4.0, this feature is being developed and applied more and more each year. It's something that is constantly improved with each update to ensure PT Daya Cipta meets the standards of Industry 4.0 as it keeps evolving and changing over the years. With their constant upgrades, they will always be ahead of the competition.

CPS PROJECT

HI-ACE PACKAGING PTE LTD, SINGAPORE

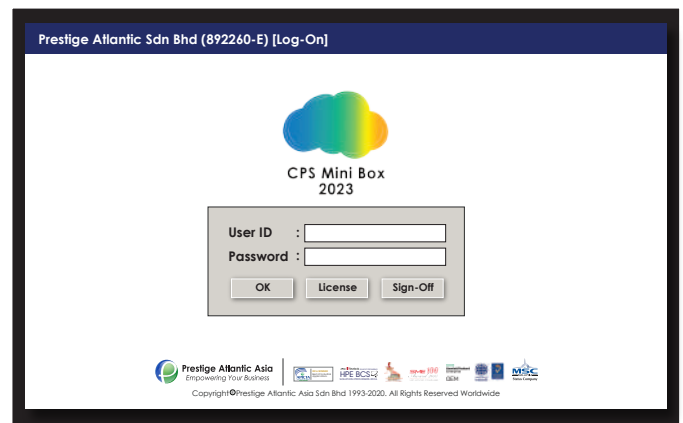

CPS 2023 MINIBOX, FOR CONVERTING CARTON

Hi-Ace Packaging is a manufacturer of paper boxes and paper boards in Singapore, situated in the North Spring Bizhub. Prestige Atlantic is happy to be part of Hi-Ace Packaging's success, as they have just signed up to use the CPS 2023 Minibox for their operations.

This Minibox solution is suitable for small operations with less than 30 users. The MiniBox package is being upgraded every year with Industry 4.0 features to ensure that it keeps up with the times. MiniBox functions are better as it is constantly improved to prepare companies for better usage of operations that need to live on the cloud.

It is an all-in-one package that puts all the functions of the factory into one singular system, making it easier for staff to operate and maintain. The Minibox solution is in internationally reputable data centres that operate 24/7 that are well-equipped with high-performance internet access, power protection, and fully air-conditioned, fire-proof building with high security. This makes operations secure with very little downtime. With Prestige Atlantic's yearly improvements, Industry 4.0 features keep improving to keep up with times.

CPS PROJECT

FOCUSPRINT SDN BHD, MALAYSIA

CPS 2023 MINIBOX, FOR OFFSET PACKAGING

FocusPrint is a company that has been well established since 1978 in Kuala Lumpur, Malaysia that focus on offset packaging. With its workforce of 100 people strong, they are a multiple award winner of best suppliers in the country. FocusPrint factory operates in the countryside far away from the city. The sales office operates in KL City.

Recently, FocusPrint has adopted Prestige Atlantic Asia CPS 2023 Minibox, which will improve the company's operations. The CPS 2023 Minibox incorporates many new features that are Industry 4.0 ready. Together with other companies that have installed CPS 2023 Minibox, they can put their software, an all-in-one operations package, especially in the areas of production planning & production status, on the cloud. Minibox is in world-class data centers that operate in excellent conditions, 24/7 properly.

In the past, different vendors provided software to run the show. But now, with the help of Prestige Atlantic Asia and its Minibox, it replaces everything with this solution, making operations run more smoothly as everything is appropriately integrated and works better this way. Prestige Atlantic Asia understands the demand to operate manufacturing plants that require better efficiency and functionality. In the years to come, with the many yearly upgrades, FocusPrint will not have to worry that it will be left behind the competition.

INDUSTRY 4.0 PROJECT

KOTAK MALAYSIA, MELAKA

CPS + CORRUGATOR 4.0

Kotak Malaysia manufactures and sells corrugated cartons and boards. It operates from Air Keroh, Melaka, Malaysia.

The company invested in a new 2.2 meter state-of-art corrugators' machine. With the help of Prestige Atlantic Asia, the company also installed the **CPS + BHS Series module** that consists of CORR Schedule real-time link to BHS's CCC.

CPS CORR Schedule estimates paper roll consumption and picklist with direct link to CPS Roll Management. It computes down-stream inventory like ink, flexo print, rotary die cut. The CORR Floor Track real-time links to the BHS's Stacker with auto print Dry-End Label incorporates with data ready for Auto Conveyor which can be used in future development. CORR production data has a real-time link to the CPS back-end ERP.

PINE PACKAGING (M) SDN BHD, MALAYSIA

CPS + CONVERTING 4.0

Pine Packaging specializes in furniture packaging, operates in the north of Johor state, Malaysia.

Pine Packaging recently invested in the **CPS + FX1 link module** with the help of Prestige Atlantic Asia. Production planning and production floor data integrates in real time with the **HANWAY Digital Printer** for Corrugated Cardboard.

The production floor data will then auto integrate with CPS back-end ERP like Customer Service to know the progress of digital print status and CPS Production Executive information to see overall HANWAY production performance. Waste analysis and downtime analysis and CPS CEO Dashboard is shown on a mobile app to see real-time HANWAY production performance.
